## GO FLEX

BOW CENTRALIZER

Designed and manufactured to meet the demands of the most challenging wells, Summit Go Flex Bow Centralizers have what it takes to deliver superior performance when you need it the most.

Summit Go Flex Bow Centralizers are fabricated with high quality alloy steel and advanced manufacturing processes, to provide optimum flexibility and reliability. Each is engineered to provide low starting forces - up to 13 times lower than the maximum industry requirement - while maintaining high restoring force: up to 5.7 times higher than our competitors.

What's more, Summit Go Flex Bow Centralizers are tested in accordance with API 10D specification requirements, to ensure structural integrity, no fatigue failures and ease of installation.

Available in both single and dual bow configurations, Summit Go Flex Bow Centralizers are manufactured with pride by Summit in the USA.
